Exploring Eco-Acoustic Data with K-Determinantal Point Processes

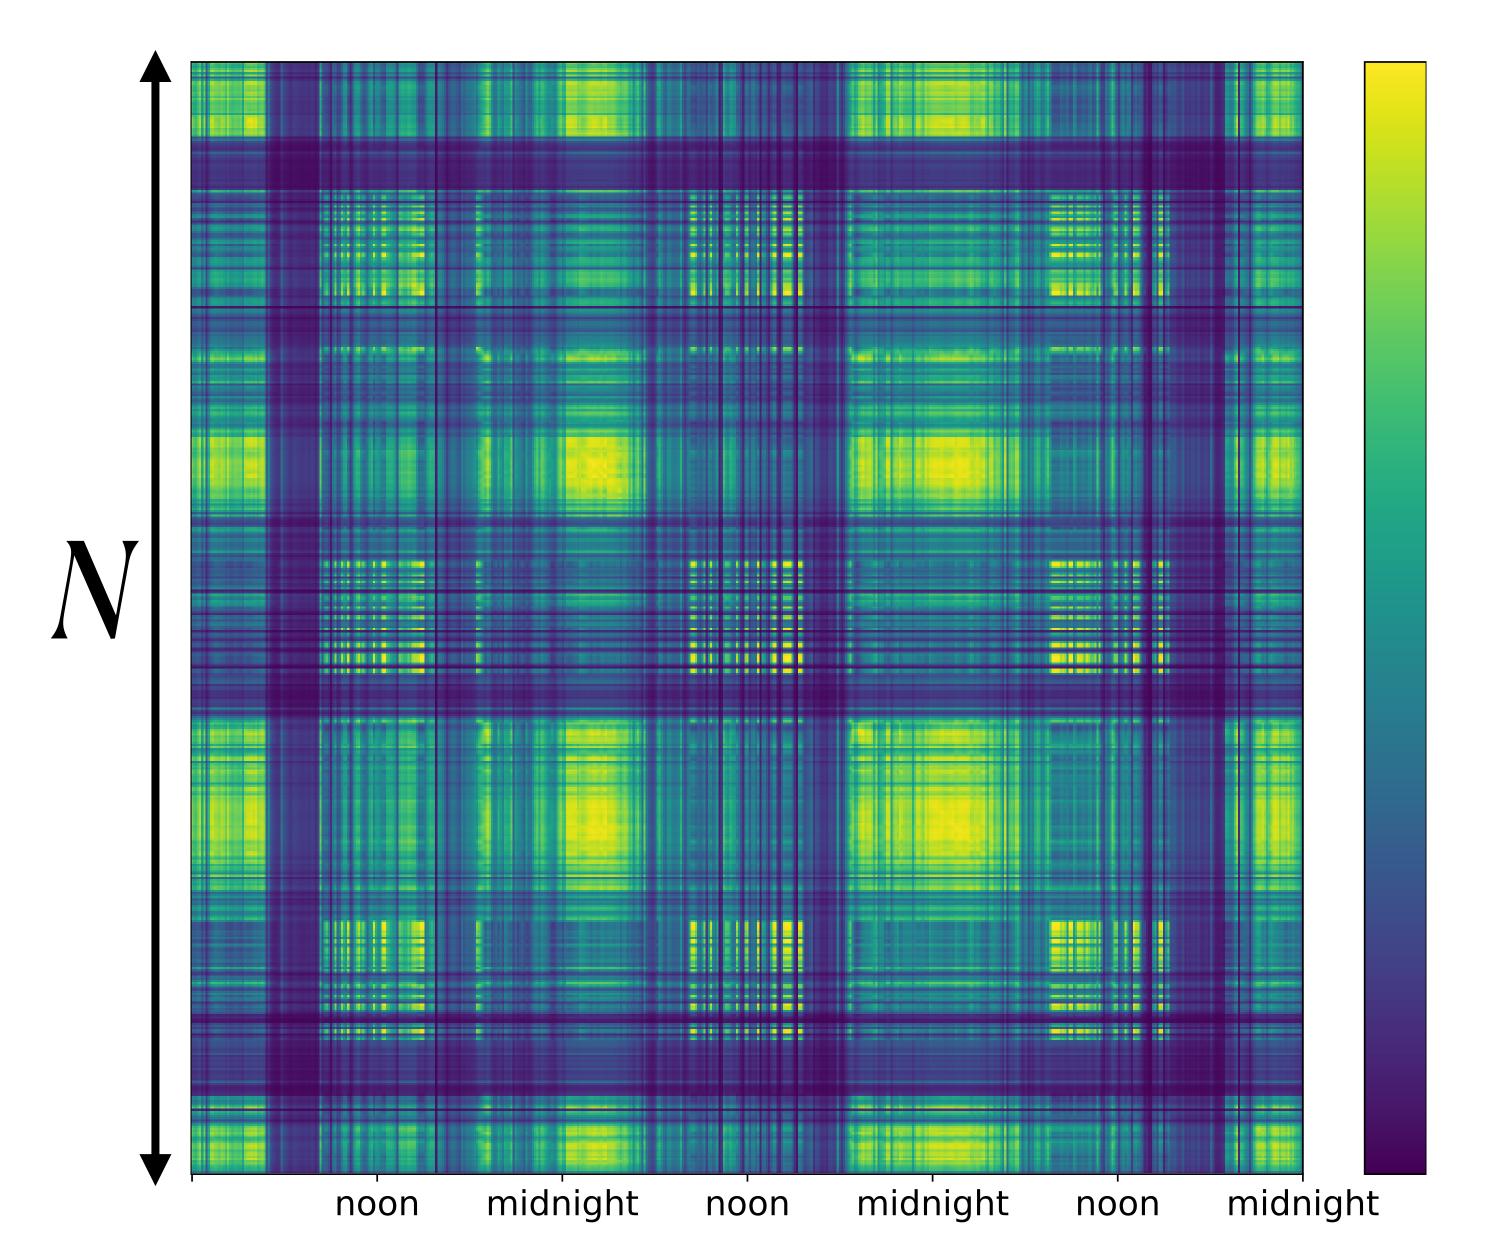

Vincent Lostanlen, CNRS, LS2N with M. Outidrarine, P. Baudet, M. Lagrange, J. S. Ulloa

Nancy, November 2022. My research is funded by the French government.

Soundscape summarization

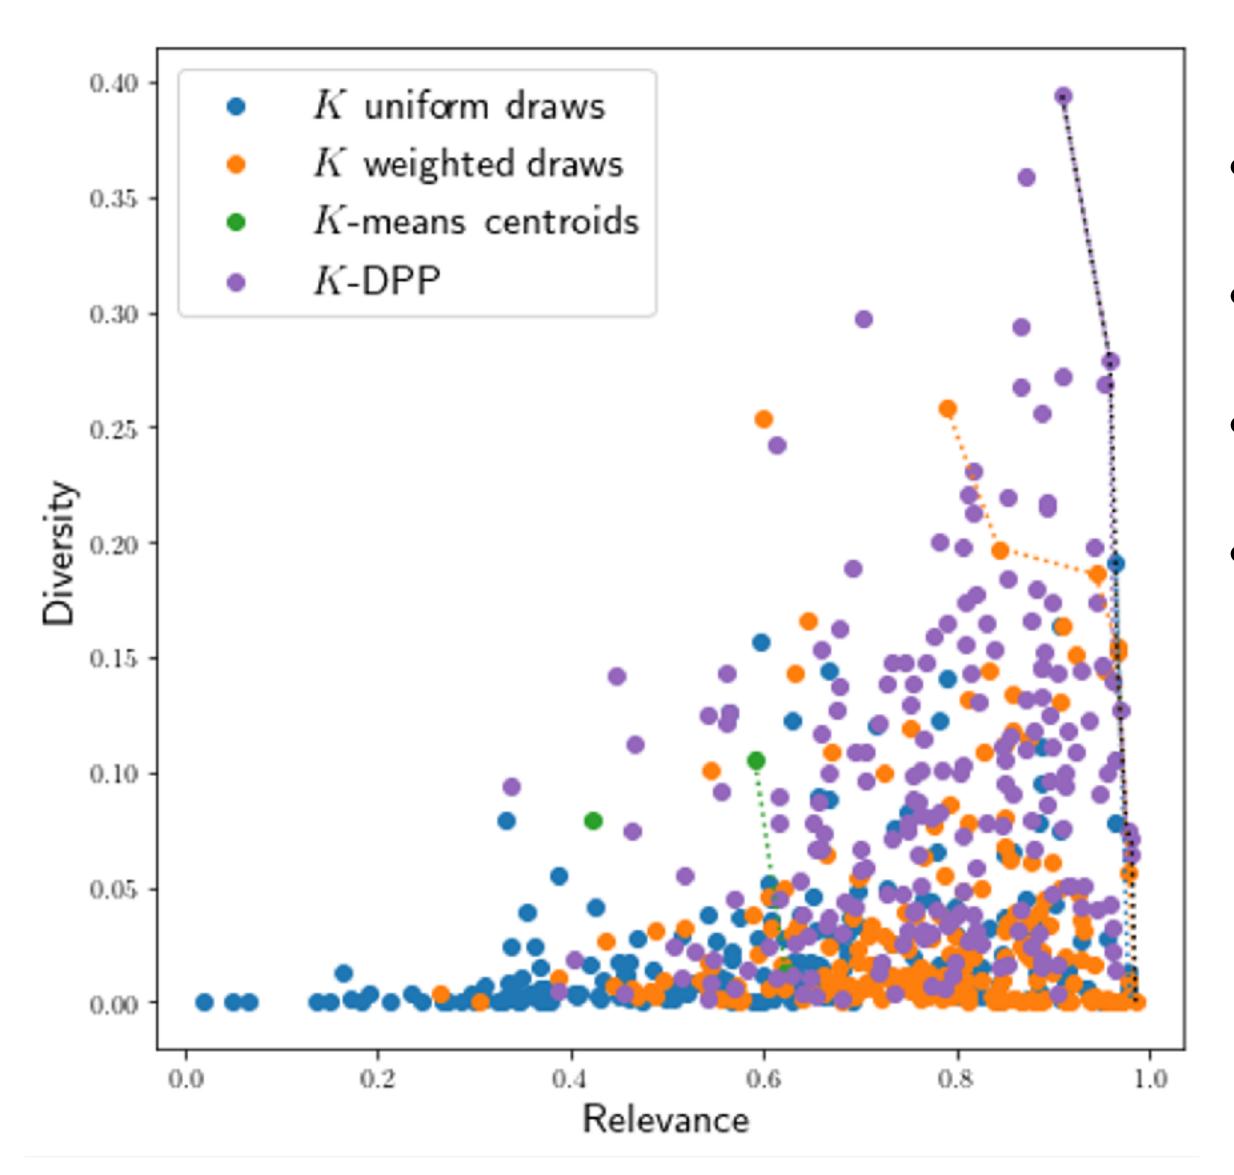

K-DPP likelihood kernel

The joint probability of drawing any two samples should grow in proportion to their cosine distance in feature space.

Open-source benchmark

- **DPPy** for probabilistic modeling
- scikit-maad for acoustical relevance
- Kymatio for acoustical diversity
- BirdNET for evaluation

Another application in mind?
